TOMOKACHI

WHITEPAPER

INTRODUCTION

Nestled deep in the mountains of Khalatsa rests an enigmatic cave known as Bargurn. The UKORAI tribe has stood as its sentinels for centuries, with their strongest warrior, Tomokachi, standing guard.

Tomokachi's mastery of shape-shifting and lethal combat techniques make him the perfect protector of the cave's ancient relics and valuable treasures. However, his duties would lead him down an unforeseen path - one that takes him into the world of cryptocurrency.

Within this realm, Tomokachi emerges as a promising project, distinguished not only by its innovative approach to cryptocurrency but also its striking visuals and engaging community-driven initiatives.

The project's steadfast focus on cultivating a devoted following and building a strong foundation sets it apart, as it prepares to make waves within the Ethereum (ETH) ecosystem.

Join Tomokachi on his journey as he navigates the dynamic and ever-changing universe of cryptocurrency, channeling his warrior spirit and steadfast commitment to the project.

TOMOKACHI FUNDRAISING

Tomokachi would be launching a first-of-its-kind crypto fundraiser, using SAFO OTC yield farms to raise presale funds. This unique approach to fundraising is sure to appeal to investors looking for a secure and profitable way to support new projects.

So, what exactly is an OTC yield farm? Essentially, it's a way to stake ETH and earn rewards in the form of TMK tokens. When you invest in the SAFO OTC yield farm, you'll contribute 50% of your funds to the project liquidity and 50% to the OTC trade system. Your holdings will be locked in for the full duration of the farm, but you'll have the option to destake at any time with a 20% penalty on your investment.

The rewards for staking in the OTC yield farm will be moderate, but they'll give you the opportunity to earn interest on your investment even before the project launches. The APR rates in the fundraiser pool will be attractive and available throughout the full duration of the pool, even after the project is launched. This is an added reward system for early holders, providing an extra layer of security.

This unique fundraising concept offers an alternative to ISPO funding, with the same level of security and easy-to-use tools integrated into a common ISPO setup. Your funds will be 50% locked in the SAFO LP pool, which the Tomokachi team never physically touches, ensuring that there is 0% possibility of rug pull or malicious behavior.

ur. The LP belongs to the investors at all times, making this one of the safest investment options on the market.

Not only will the SAFO OTC yield farms be used for fundraising, but they'll also be utilized throughout the full duration of the project. Tomokachi will continue to set up new farms to strengthen its LP and provide investors with additional reward systems. LP is crucial for whales, making this an ideal investment option for those looking to get in on the ground floor of new meme or degen projects.

Tomokachi is thrilled to be the first project to use this innovative fundraising approach, and investors are sure to be excited about the opportunity it presents.

TOMOKACHI STAKING POOL

Tomokachi would partner with SAFO for pre launch staking pools. SAFO will offer us two dual staking pools: SAFO-TMK and TMK-TMK. These staking pools will be available before the launch, allowing you to utilize the technology and start earning rewards right from the second after launch.

TOMOKACHI INVESTMENT TREASURY WALLET

Before the launch, Tomokachi will create the Tomokachi treasury wallet which will serve as a project-to-project investment fund for special utility setups or emergency use. All investments made through the wallet will require community vote approval, and we welcome suggestions for new investments at any time.

TOMOKACHI UTILITY NFTS

Tomokachi would introduce various utility NFTs that will serve as access keys or tools to use with our technologies.

TOMOKACHI STABLE COINSTAKING

During the launch week, Tomokachi will introduce a TMK-USDT staking pool, which will allow users to stake their TMK in exchange for USDT tokens as rewards. To participate in this staking pool, users will require a specific NFT series as an access key. These NFTs can be minted and obtained through the Tomokachi Dapp, which will also feature other utility staking pools.

TOMOKACHI AI TRADINGBOTS ETH AND AUTO BURN NFTS

Tomokachi have exciting plans to develop an AI trading bot system specifically for ETH. The trading bots will be available for rent on a weekly or monthly basis, exclusively for holders of our dedicated auto-burn NFT series.

To use the AI trading bot system, you will need to first purchase a time-bound NFT, which will grant you access for the duration of your choosing (either one week or one month). After the duration expires, the NFT will be automatically burned and your holdings will be withdrawn to your wallet. To continue using the bot, you will need to purchase another valid NFT.

You will be able to stake up to two NFTs at a time in the dapp, ensuring your continued use of the bot. This unique system guarantees that only those with valid NFTs will be able to use the bot, providing an added layer of security for our users.

TOMOKACHI P2E GAME

Tomokachi would be creating an immersive P2E (Play-to-Earn) game set in the world of Tomokachi. In this game, players will have the opportunity to use unique characters as utility NFTs to progress through the story. These NFTs can be upgraded by either investing time or effort in the game, or through manual top-ups. The NFTs can also be traded within the game's market system.

To further enhance the gaming experience, we will include in-game shops and advertising to generate additional revenue for the project. As players accomplish tasks and refer others to the game, they will receive rewards in the form of in-game currency or other bonuses. This creates an extra incentive for players to stay engaged with the game and continue to explore the Tomokachi world. withdrawn to your wallet. To continue using the bot, you will need to purchase another valid NFT.

TOMOKACHI REFERRAL PROGRAM

Tomokachi is a community-driven project that aims to foster a thriving and financially-rewarding community. To this end, we have incorporated multiple referral systems into our dapps, including NFT minting, OTC farming, and P2E gaming. By participating in our referral programs, you can become an integral part of our success.

Please note that referral commissions will be paid out exclusively in non-project coins or other benefits.

CONCLUSION

Investing in Tomokachi presents a unique opportunity for investors to get involved in a promising project with a strong community and innovative approach to cryptocurrency. With the upcoming launch of the SAFO OTC yield farms, investors have a secure and profitable way to support the project and earn rewards even before the project launches. The use of staking pools, NFTs, and AI trading bots further demonstrates the project's commitment to building a strong foundation and cultivating a devoted following. The P2E game set in the world of Tomokachi offers an immersive experience for players and potential earnings through the use of unique characters as utility NFTs. Overall, investing in Tomokachi provides investors with a diverse range of investment options and the potential for significant returns.

TOMOKACHI TOKENOMICS

The tokenomics distribution of the total supply of Tomokachi . Here's a breakdown .

1. Total Supply: The maximum number of tokens that will ever be in circulation is 100,000,000.

2. Max Wallet: The maximum number of tokens that can be held in a single wallet is 2%, which may be intended to prevent any one person or group from controlling a significant portion of the token supply.

3. Staking Rewards: Staking rewards are set at 10%, which means that users who hold and stake their tokens can earn a return on their investment.

4. Team Wallet: The team wallet is set at 10%, which may be intended to incentivize the team members and contributors to the project.

5. Seed Share: Seed Share is set at 20%, which may indicate that the tokens were initially distributed to seed investors to fund the project.

6. IDO like OTC farm: The First 50% filled will be paired as lp token within the contract while the second 50% will be sold as over-the-counter (OTC) sale

7. OTC setup 2: This is set at 10%,it would be used for refilling the OTC farm

8. Tax: The buy/sell tax is set at 2%, which may be intended to discourage frequent trading and to provide a source of revenue for the project.

9. Auto Burn: The auto burn is set at 0.65%, which means that a portion of each transaction will be burned, effectively reducing the total supply of the token over time.

10. Marketing Wallet: The marketing wallet is set at 0.65%, which may be intended to fund marketing and promotional activities for the project.

11. Development: The development fund is set at 0.7%, which may be intended to fund ongoing development and maintenance of the project.

THE TOMOKACHI ROADMAP

The Road Map outlines the strategic plan of the Tomokachi project in four phases.

Phase 1

Tomokachi project aims to establish its online presence by launching its website, releasing its white paper, conducting seed sales, and conducting KYC and contract audits. It also plans to build its Telegram bots, engage in organic marketing, establish partnerships with \$SAFO, and participate in big community contests and giveaways. The ultimate goal in Phase 1 is to reach 1000 Telegram members organically.

Phase 2

The focus shifts to launching Tomokachi and staking on the \$SAFO platform. The project will integrate NFT minting and stable coin staking on its website, launch the first utility NFT, and initiate TMK-USDT staking pools. The project also aims to expand its social media reach, launch 20 LTD edition Tomokachi NFTs, and apply for listings on CoinMarketCap and CoinGecko. The goal in Phase 2 is to reach 2000 Telegram members, 1000 Twitter members, and 500 Discord members.

Phase 3

This marks the introduction of AI trading bots, auto burn NFTs, and P2E games. The project plans to use real-life marketing strategies, including guerrilla marketing solutions, to take its promotion to the next level. It will also set up its Tomokachi web store and launch its AI bot NFTs and platform. The project aims to set up arbitrage bots between DEXs, establish an ambassador program, and reach 3000 Telegram members, 1500 Twitter members, and 1000 Discord members.

Phase 4

Tomokachi focuses on launching its first P2E in-game characters NFTs, beta testing its P2E game, and launching the official P2E game. It will also initiate gaming partnerships, secure its first CEX listing, and participate in crypto events in Dubai and Miami. Finally, the project will launch on the SafeOne Blockchain, and the ultimate goal is to reach 10000 Telegram members, 5000 Twitter members, and 2500 Discord members. Tomokachi's fully doxxed and KYCed team, with a proven track record in crypto, will ensure full transparency and honesty towards the project's community and users throughout the entire roadmap.
